

ABSTRACT OF THE DISCLOSURE

A commercial wringer assembly for attachment to a mop bucket is formed with a flange that projects outwardly over the mop bucket and has a contoured forwardly open recess sized to receive and releasibly support or hold the handle of a mop located in the bucket. The recess has forward edges that are contoured to guide the mop handle into the recess and is positioned to support or hold the handle in an upright orientation extending over the mop bucket while the mop is unattended in the bucket.
